

Instead of incinerating or landfilling biosolids—which is costly and wasteful—Terrapure Organics Solutions offers programs that apply treated municipal biosolids to farmland. It's the most sustainable and least expensive solution.

Municipal Biosolids Management

As a leader in biosolids management, we have the expertise and the resources to collect municipal biosolids reliably, cost effectively and without interrupting your treatment plant operation. Every professional who arrives onsite is certified to do their job safely, competently and in a way that allows you to continue business as usual.

You can rest assured our biosolids application methods are responsible, compliant and pose no risk of liability to your municipality.

Services Offered Include

- Turnkey biosolids management
 - Interruption-free pickup
 - Transportation
 - Land application
 - Storage of liquid and solid biosolids
 - Comprehensive annual reports
 - Emergency response
- Dewatering biosolids
- Cleaning lagoons and pumping stations

Industries We Serve

- Municipalities
- Farming (soil revitalization)
- Mining (land reclamation)

Recovering Value

- By applying biosolids to agricultural land and mine land reclamation projects, we keep valuable resources from being wasted. Land application is the lowest-cost management option, and our vast land bank—and storage opportunities—makes those cost savings available year round.
